

## REQUIREMENTS

Please, verify that the following components are installed on your computer

- Windows XP (or any able to run access2003)
- Java installed (if not download from : <http://www.java.com/en/> )

## GETTING STARTED

The following procedure will help you in download and install the MHEDYN user interface from the website page: <http://www.unige.ch/cabe/dynamic/> :

1. Download the ZIP file : **CHIAM.ZIP**
2. Decompress the file on the **C:\** drive
  - A directory called **C:\CHIAM** will be created
3. Install **MHEDYN INTERFACE** on your computer
  - Go on **C:\CHIAM\INSTALL\MHEDYN\_VXXX**
  - Double click on the **SETUP.EXE**
  - Follow the instructions . . .
  - This will install the MHEDYN Interface and the Access 2003 runtime
- 3 Double click on the icon, the main menu of the MHEDYN interface will display

MhedynInterface\_vXXX

Notes:

- If you have secured any Access Database you will have to give the same user/password when opening the MHEDYN Interface.
- If you did NOT remove properly an old version of the MHEDYN Interface, you will have to clean your registry before to re-install a new version.
  - o Here is how to do :
    - Open the registry (Start, Execute : **REGEDIT**)
    - Open the key : **HKEY\_LOCAL\_MACHINE → SOFTWARE**
      - SEARCH for : **MHEDYN** (click right button)
      - Check the value of **ProductName** is “MHEDYN Interface” and **delete** the KEY.
      - Now you can re-install the MHEDYN Interface.
