Academic outputs and citizenship. Is the social and political integration a factor of success during higher studies?

Jean-François Stassen
Piera Dell’Ambrogio
OVE – UNIGE (Observatoire de la vie étudiante – University of Geneva)
Dimensions of citizenship

• First differentiation: passive – active
• Second differentiation: civil – political – social

→ Social citizenship: occupy an useful position in the society
• Social citizenship:
  → social integration
  → job integration

These two integrations are more and more difficult to distinguish (job = great integrator – Y Barrel, 1990) and more and more necessary to be both addressed
Job and social integrations

• Class struggle («lutte des classes»)
  Job integration = alienation
  Social integration in spite of job integration
• Positions struggle («lutte des places», V. de Gaulejac, 1994)
  Job integration = big stake
  Social integration is possible only if job integration is realized (job integration as necessary condition of social integration)
Some indicators of citizenship

- Restricted meaning
  - Nationality
  - Opinions (political, on the society, on the world…)

- Active
  - Political commitment
  - Student participation
  - Voluntary involvement
  - Social involvement

- Large meaning
  - Occupational
  - Student job
  - Perspective towards job integration

- Passive
  - Civil
  - Political
  - Social
Academic success and student life outputs

- Degree obtained or first year succeeding
- Respondents satisfaction towards some diverse fields of student life

Citizenship indicators
Active citizenship: political, social and leisure participation

Graph 1: Students Involvement in associations according to the type of association

Active citizenship: political activism

Graph 2: Academic success according to the frequency of political activism

Sources: OVE, 2001, 2009
Passive civil citizenship: nationality or residence permit

Graph 3: Academic success according to residence place during secondary school

Sources: OVE, 2001, 2009
Active citizenship: exercise of remunerated activity (as student job)

Graph 4: Academic success according to the job weekly duration

Sources: OVE, 2001, 2009
Passive occupational citizenship: prospective perception of the future probability to find easily a job after higher studies

Graph 5a: Satisfaction towards University of Geneva according to the anticipated difficulty of prospective job integration (response to the question «How easily will you find a job after your higher studies?»)

• An hypothesis to be checked:
If the prospective job integration is problematic, the student will redirect his interests, expectations and experiences to other fields of the citizenship.

• It’s the substitution/replacement logic!
Test of substitution hypothesis

• If the prospective job integration is perceived as difficult, the student will redirect his objectives to a more active, political and social citizenship.

• No result confirmed this hypothesis…
Even, some results gave statistical relationships suggesting the opposite of the substitution hypothesis...

• More than the substitution of the expectations, we observed the accumulation and/or the combination of the expectations. («cumul des handicaps»)
As conclusion,

• Some findings:
  – The active citizenship of the students is weak
  – The social and job integration (if not excessive) are found as a good way to lead towards academic success and satisfaction for the student life
  – The importance of the job integration is as strong as it determines a lot of outputs of the students and academic realities (in other terms, if you perceive your job integration as guaranteed, you will perceive the other fields of the student life as positive)

• In fact, the students, today, are much more oriented towards some individual expectations (job integration, but also leisure time and activities, individual development, extracurricular opportunities…) than collective and/or citizenship motivations.
