

Objectif général: acquisition lexicale
Objectif spécifique: précoce
Mots clés: langage oral, lexique précoce

Diagnostic (DSM 5) : Trouble du langage (F80.2)
Age: 4 ans
Niv scolaire/formation: pré-scolaire

Approche thérapeutique évaluée:

Modalités de passation des pré- et post-tests:																
Items choisis dans IFDC (Kern, 2010)	Fréquence à l'oral	Nbre phonèmes	Nbre consonnes	Liste	Pré-test				Post-test				Evolution

Graphique:

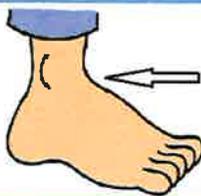

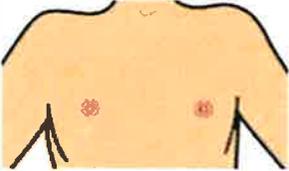

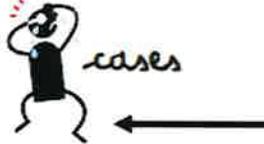

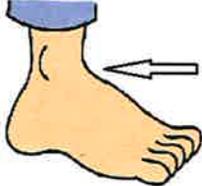

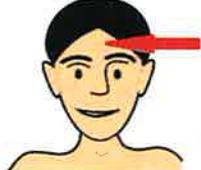

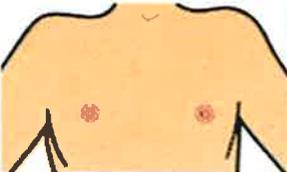

Adaptations nécessaires / remarques:

Question: quelle est la prise en charge la plus adéquate?
Seulement en logopédie, seulement à la maison (après un accompagnement parental) ou les deux en même temps ?
Les objectifs à atteindre par l'enfant sont doublés, le lexique doit être acquis en spontané quelque soit le support (au minimum 11+/13) & l'enfant doit atteindre un pourcentage de consonnes corrects de plus de 65% en spontané (seuil de l'intelligibilité pour autrui)

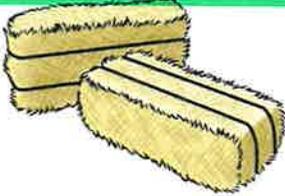

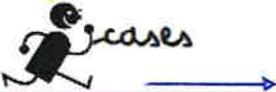

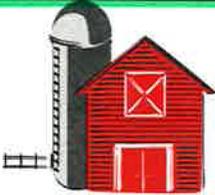

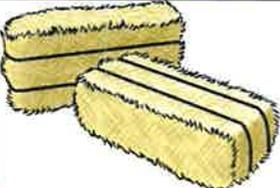

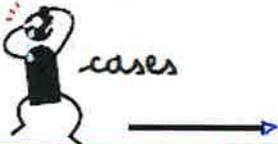

Résultats après 8 sessions:

- Liste 1 travaillée à maison uniquement sur 4 semaines :
 - lexique 10/13
 - PCC: 17/33 = 51.6%
- Objectifs acquisition pour logo pas atteints (niveau du lexique et du PCC)
MAIS évolution significative par le travail à la maison (puis stabilisation des acquis)
- Liste 2 travaillée uniquement en logopédie 4 semaines suivantes :
 - Lexique = 12/13
 - PCC = 26/33 = 78.8%
- = quand pas travaillée, n'évolue pas significativement
- Après le travail en logo :
 - = Objectifs acquisition pour logo sont atteints
 - ET évolution significative grâce au travail en logo
- Liste 3 pas travaillée = n'évolue pas (en court)
