

Title: Evaluation of environmental impacts in water ecosystems guided sustainable water resource management in developing countries; Case of sub-Saharan Africa. State of collaboration between University of Geneva-University of Kinshasa (Congo DR)

Since the year 2011, the Department F.-A. Forel for environmental and aquatic sciences (Institute for Environmental Sciences) of the University of Geneva advances in the interuniversity collaboration with the South countries, especially with the Democratic Republic of Congo Universities (University of Kinshasa and the National Pedagogical University). This collaboration aims to strengthen the capacities in academic teaching and research in environmental science, gender, service to society with potential research projects to address major environmental issues affecting the developing countries. The collaboration further explore issues pertaining to the management and protection of freshwater ecosystems, natural resources and biodiversity in context of climate change. For that, the Professor Crispin Mulaji from the University of Kinshasa will present a seminar on the current state of this collaboration.
