A Summer School centered on the challenge of **Scaling Education for the SDGs**.

How can young innovators like yourself use crowdsourcing and open data, combined with new technologies and social networks, to maximize the impact of SDG Education?

Are you a University student with a passion for making the world a more sustainable place? Participate in team-based problem solving and hands-on prototype development, from the conception phase to producing practical demos, in the **SDG Solution Space**, right in the heart of **International Geneva**.

Questions? info@gt-initiative.org

Registration / For more info:
http://gt-initiative.org/education-programs/summer-school/

Registration deadline: 30 April
Extended deadline for UNIGE and THU students: 13 May
The motivation of the SDG Summer School is for teams of University students, in close collaboration with UN organisations, to conceive ways to use open data, crowdsourcing technologies, and low-cost open source solutions to tackle sustainable development and develop prototypes suitable for deployment.

This fourth edition of the SDG Summer School will take place from 1 to 26 July 2019 in Geneva. Collaboration with the United Labs for the Global Goals, a network of partners, can be organized for teams needing specific expertise. All accepted participants receive intensive mentoring and coaching to help transform their ideas into impactful projects, and become part of a global community of civic innovators. The winning team will have the possibility to present its project at UNLEASH 2019 in Shenzhen.

Don’t miss the application deadline: 30 April / 13 May for UNIGE and THU
