Future

Self-awareness?  
Or sense of self?

Reportable ?  
Sensations?

What is (human)  
consciousness???

The state of  
understanding and  
realizing something?

Awareness of  
awareness ?

Having a sense of  
past, present,  
future ?

An organism has conscious mental states if and only if there is something that it is like to be that organism—something it is like for the organism –  
Thomas Nagel

# Is consciousness localized in a part of the brain? How can we recognize it?

# Clinical relevance of studying consciousness ?

## Disorders of consciousness

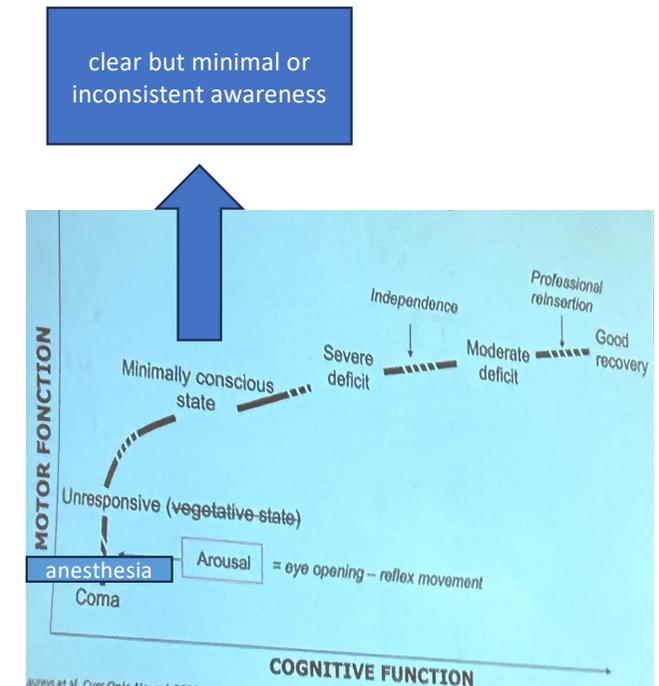

- 38% of people in MCS misdiagnosed as unresponsive (Wang et al., 2020)

## Psychiatry

- 1/8 people are living with a mental health disorder (WHO, 2022)
- Treatments no better than 50 years ago (Paul et al., 2024) → not getting to the cause

## BUT also because:

- **Absolutely fascinating**- it is what enables us to love, feel joy and sadness, make meaning, have intentionality
- **AI?**

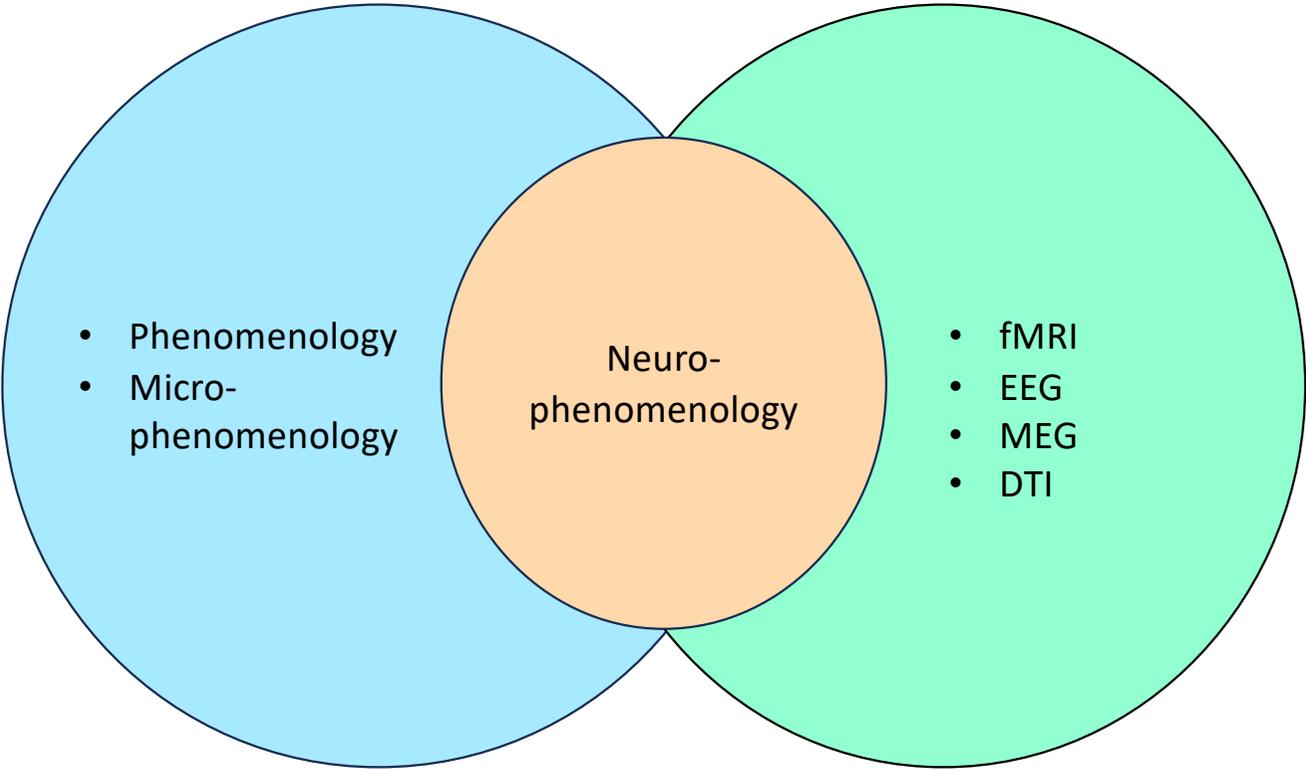

Laureys et al., 2005

# Methods for studying consciousness

Subjective experience

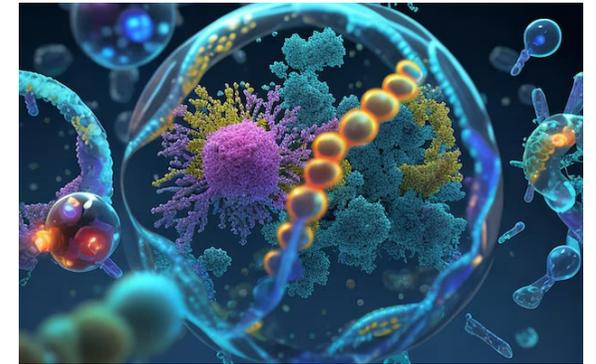

Neurophysiology/ neuroanatomy

Normal waking consciousness, altered states of consciousness, unconscious states

# What is this study contributing to the field ?

- **But how can the brain architecture support, or enable consciousness to emerge?**
  - Structure, function, and subjective experience
- **Previous studies:** Multi-scale analysis? Asymmetry?
- **Anesthesia:** unknown process + errors
- **DOC:** unreliable diagnosis + prognosis
  - Effects of lesions?
- **Psychedelics:** altered states of consciousness + treatment for mental health conditions

How much is the structural organization of the connectome contributing to a given brain state across spatial granularities ?

Do altered states of consciousness and unconscious states have specific and detectable patterns brain activity associated with their state? And how do they compare?

Effect of global neuronal inhibition vs excitation  
(anesthesia vs ketamine)

# Definitions

**Connectome:** a comprehensive map of neural connections (Advaith Veturi, UCL)

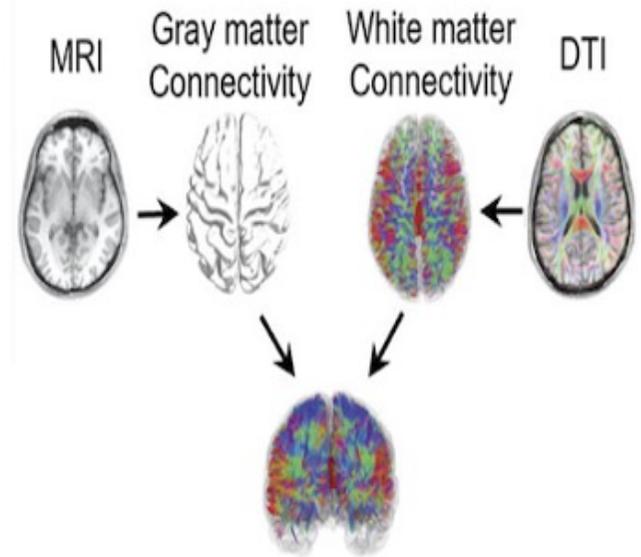

**Structural connectome:** the brain's physical connections

- DTI : architecture of white matter tracts
- MRI: cortical surface

**Functional connectome:** The collective set of functional connections in the brain

- fMRI

## (a) Human connectome

# Continued...

**Standing waves:** what allows us to hear music !

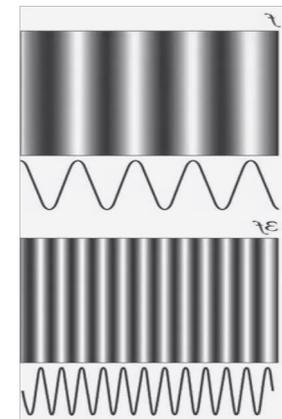

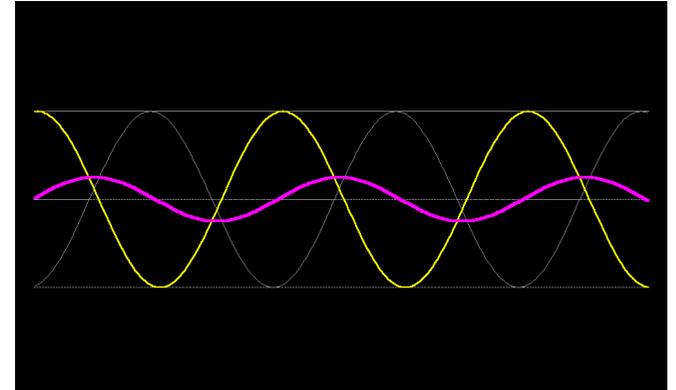

**Harmonics:** all set of possible standing wave patterns

**Connectome Harmonics:** The patterns of brain activity arising from the brain geometry at specific spatial frequencies

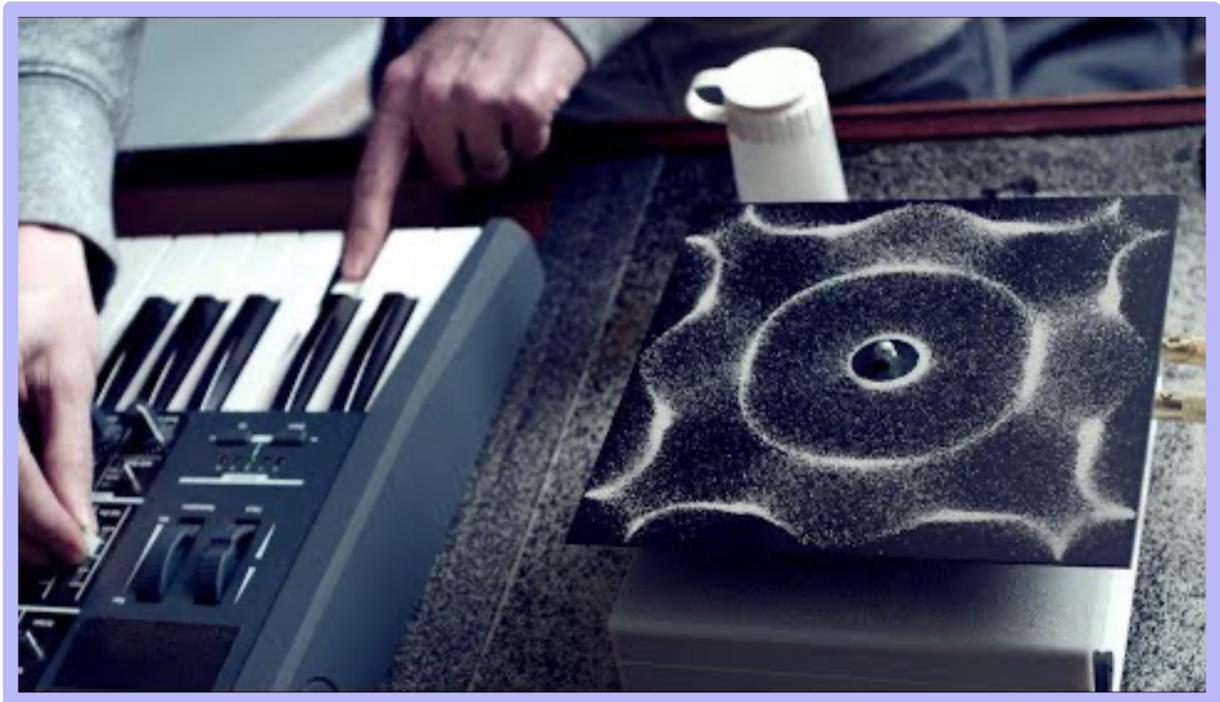

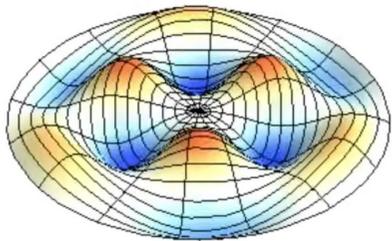

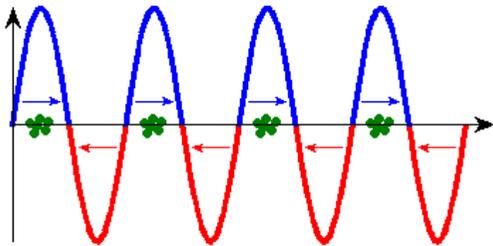

- Spatial patterns of synchronous/ harmonious oscillations

**Spatial frequencies:** coarse-grained to fine-grained

**Helmholtz equation:** describes electromagnetic wave propagation, music, morphogenesis, electron orbitals... etc

*Emerging patterns from musical notes- what kind of music is your brain playing in different states?*

Background

Discussion

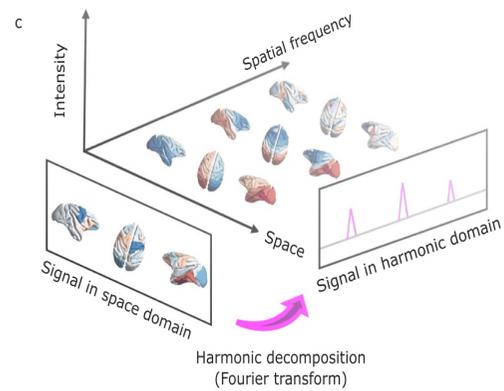

Future

Coarse-grained

Fine-grained

# What does high or low frequency really mean?

d High spatial frequency = fine-grained

Network proximity does not constrain signal values

Low spatial frequency = coarse-grained

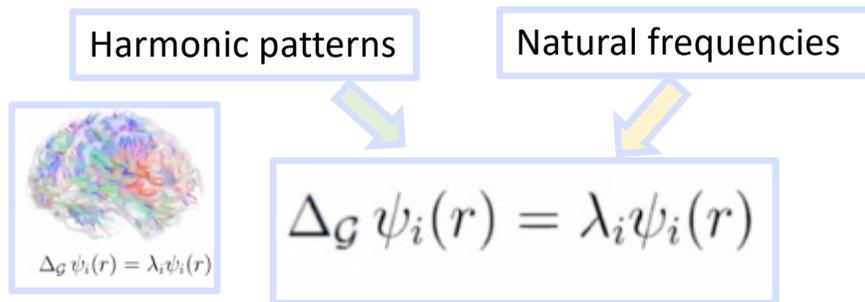

Network proximity means similar signal values

Neurons that wire together DO NOT necessarily fire together !!

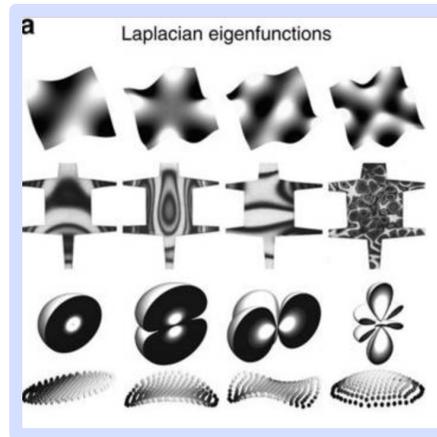

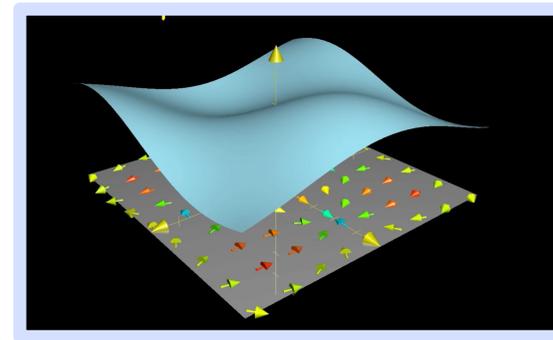

Straying from expectations?

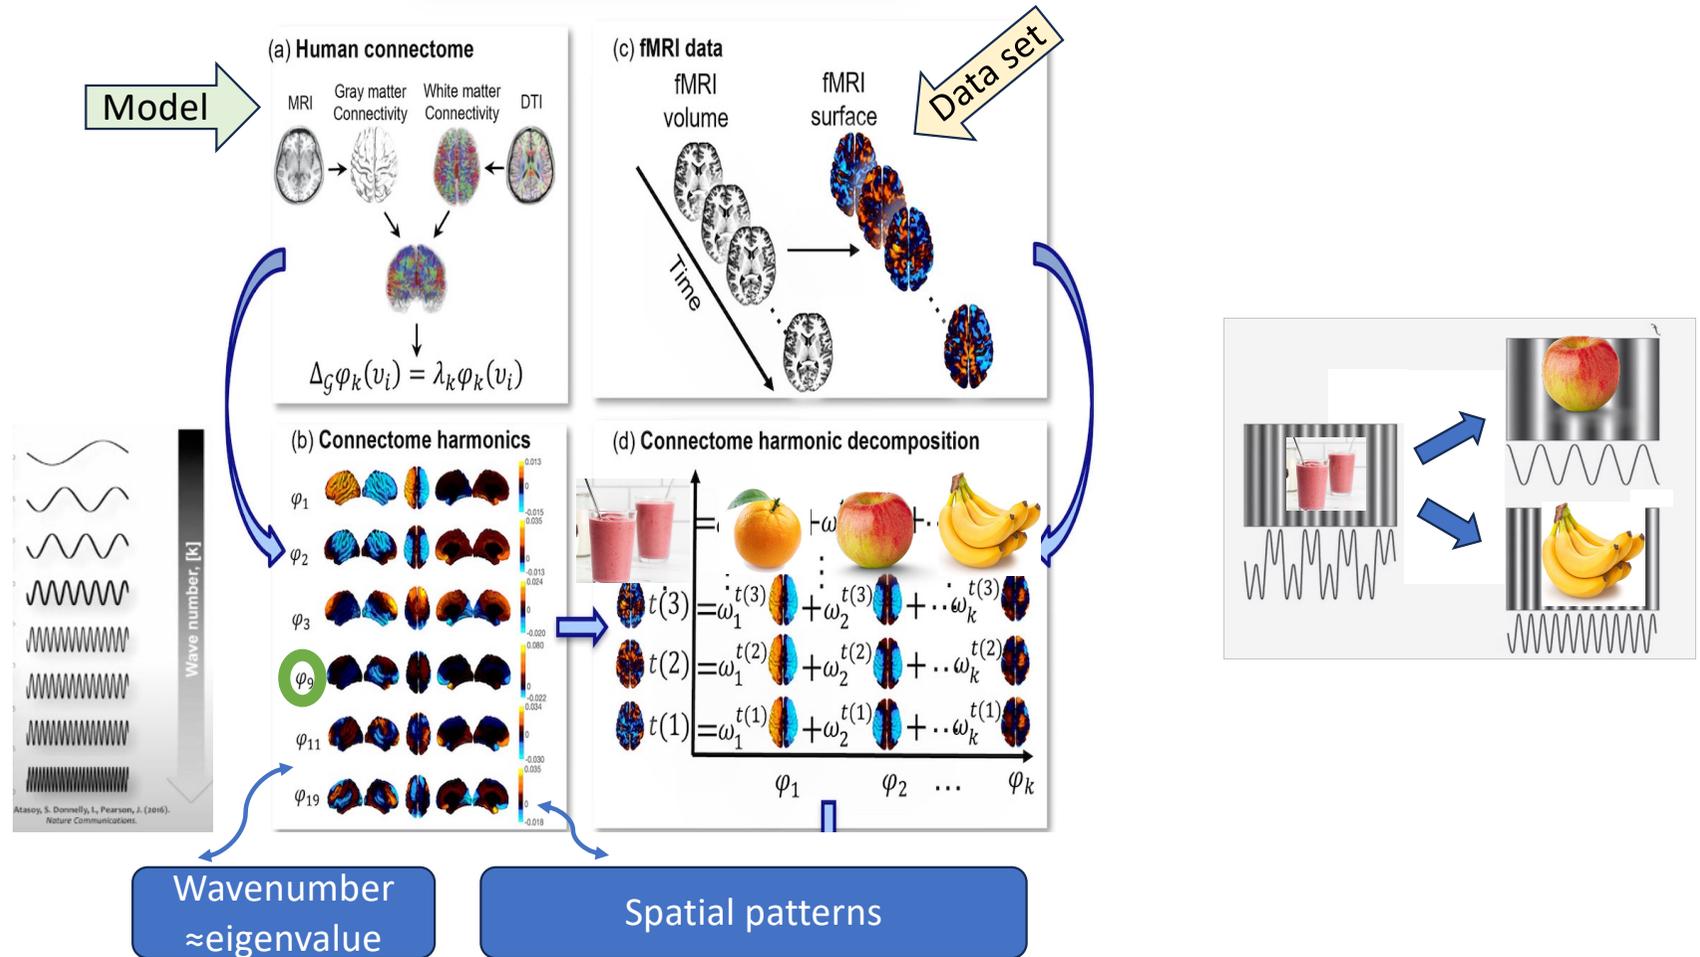

# Translating the Laplace Operator + Helmholtz equation to the brain

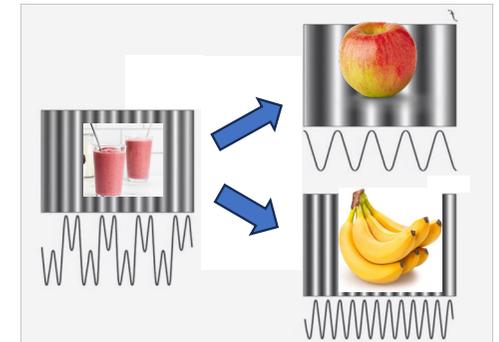

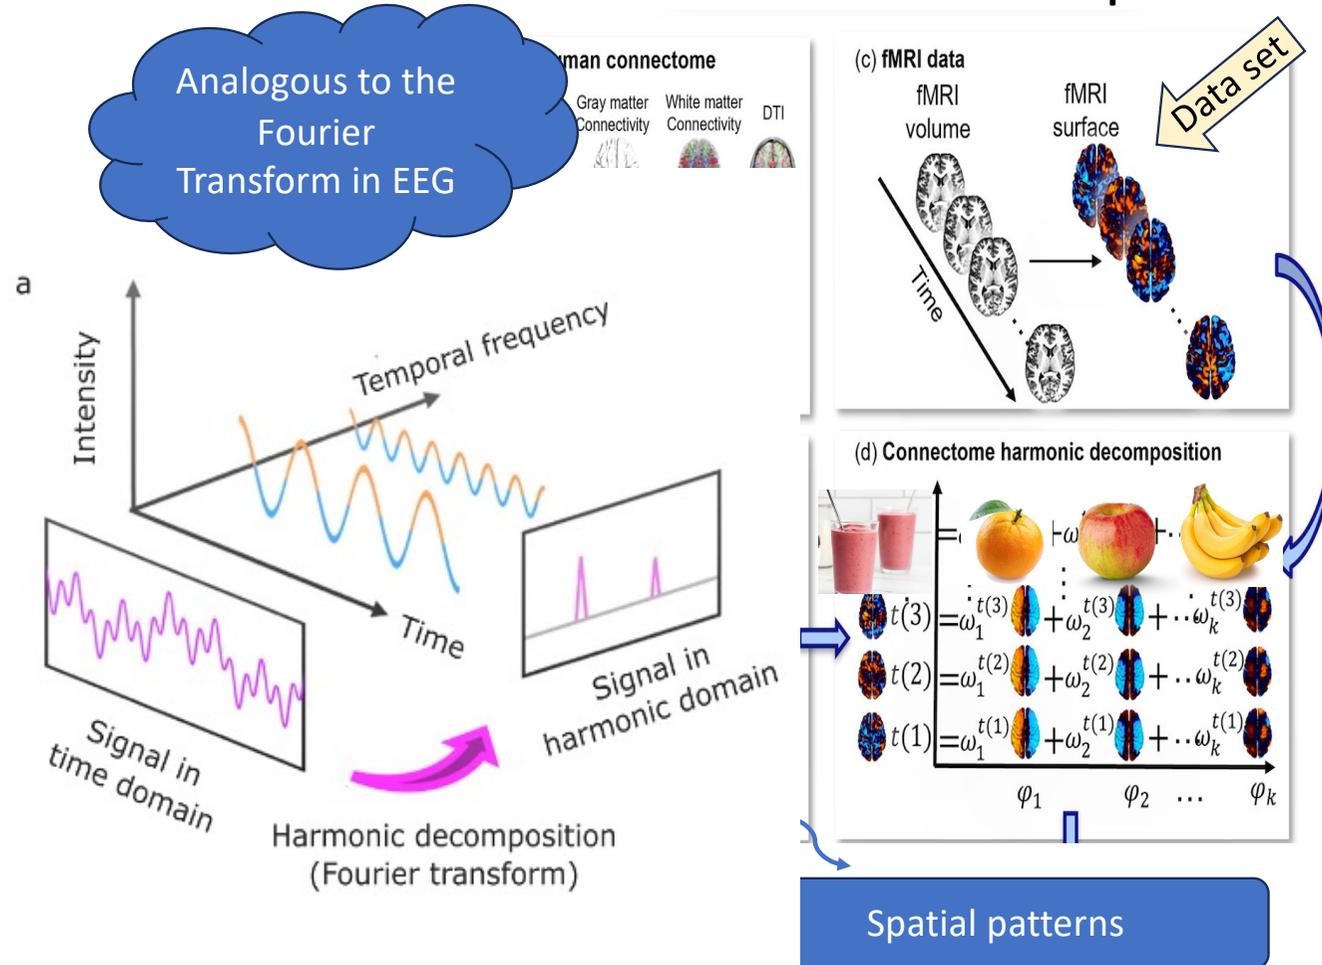

Helmholtz equation

# Connectome Harmonic Decomposition

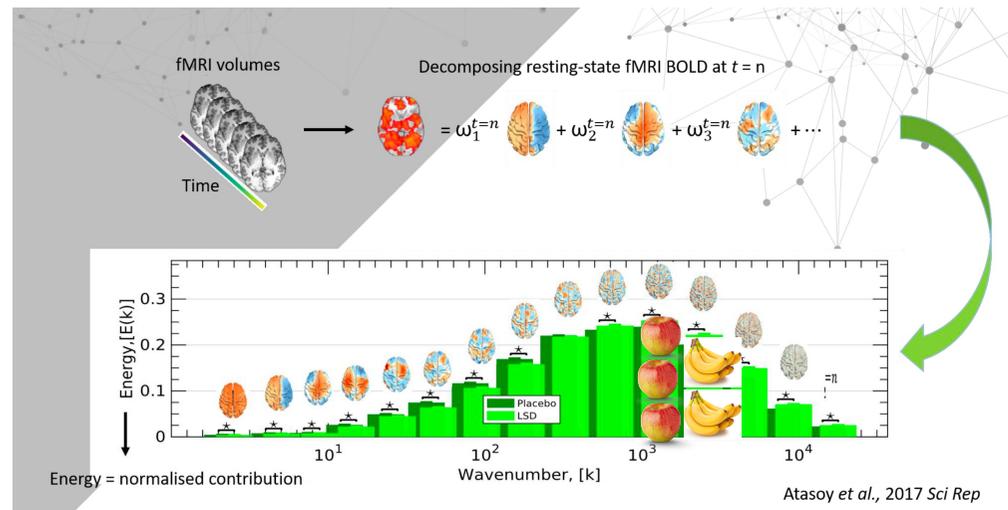

# Connectome Harmonic Decomposition

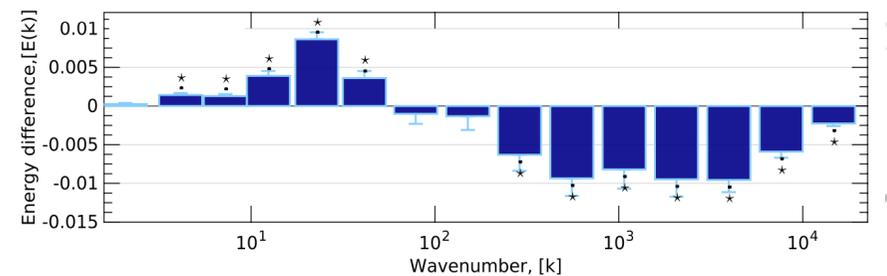

# Power, energy and entropy

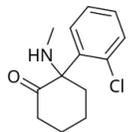

How many of each  
fruit in the  
smoothie (power)

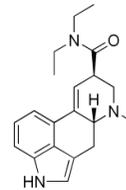

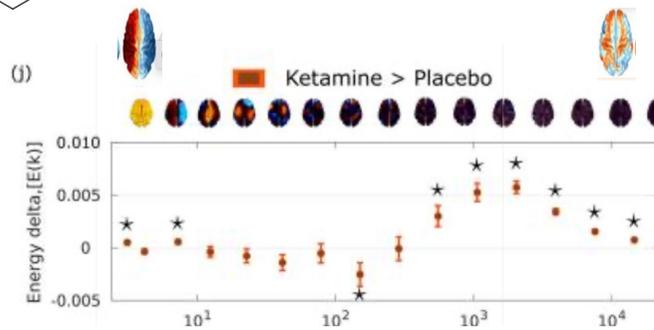

“Do we need a wide or restricted repertoire of connectome harmonics to build the brain activity we observed?”

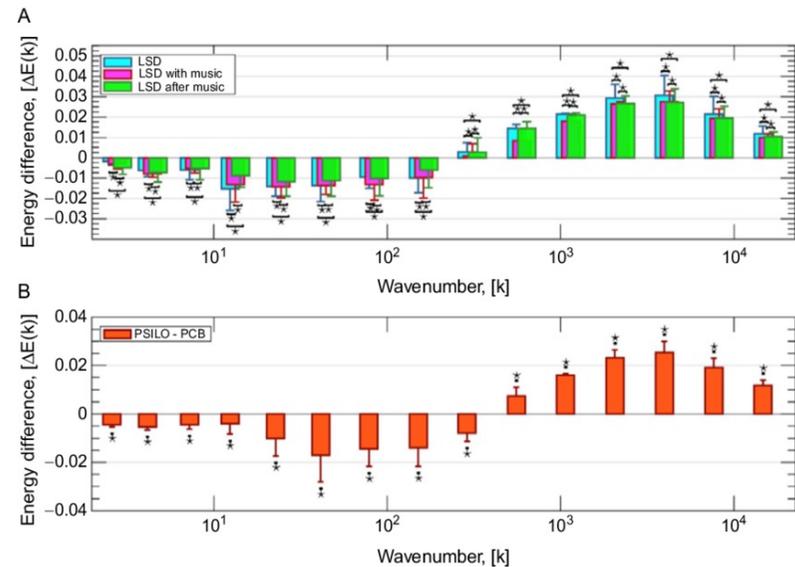

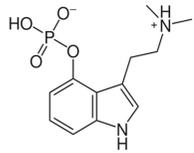

# Signatures of altered states of consciousness/ phenomenally rich experiences?

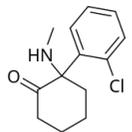

## Ketamine

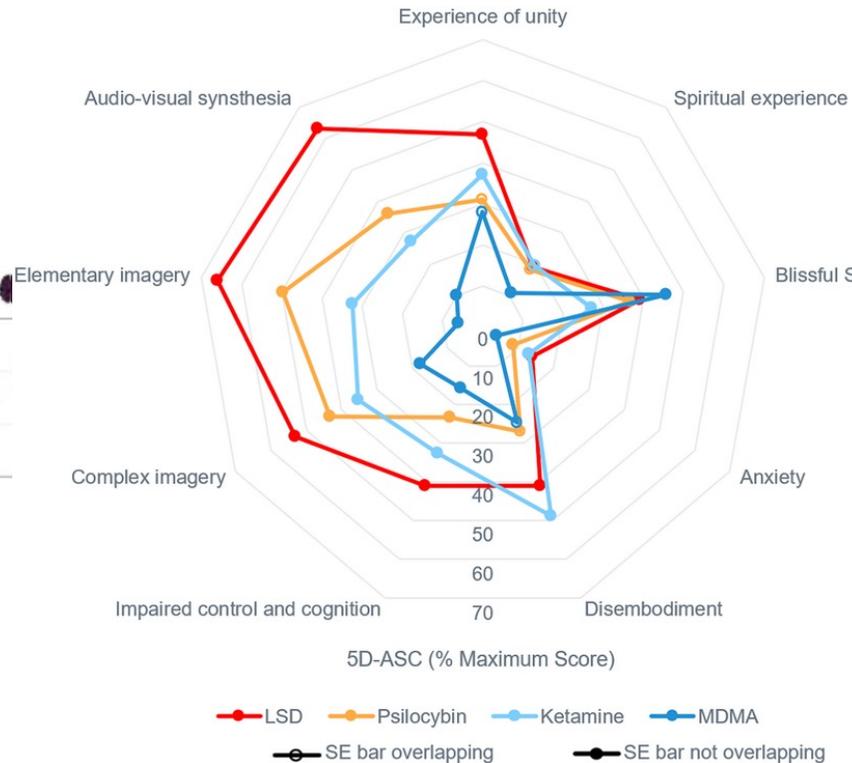

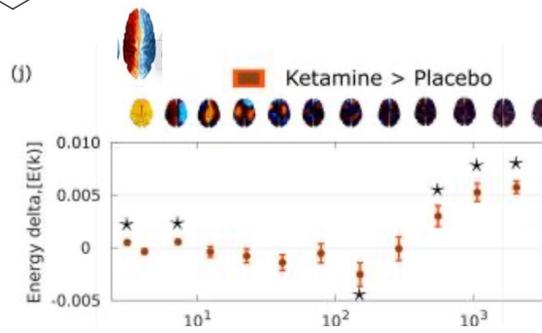

## LSD and Psilocybin

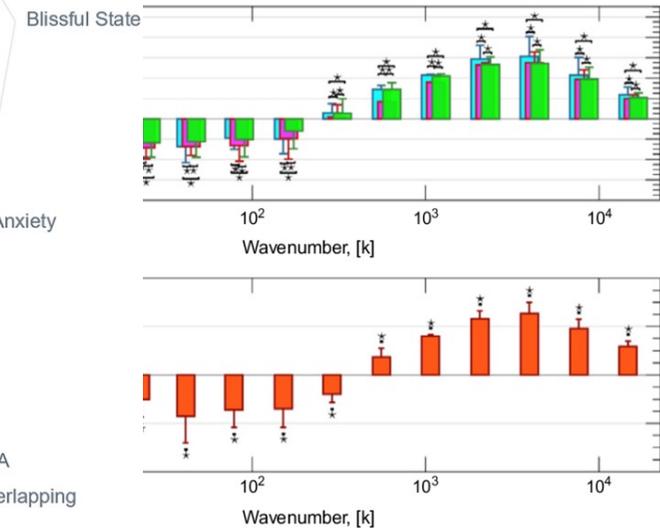

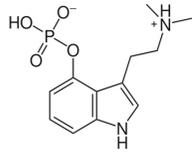

# Signatures of altered states of consciousness/ phenomenally rich experiences?

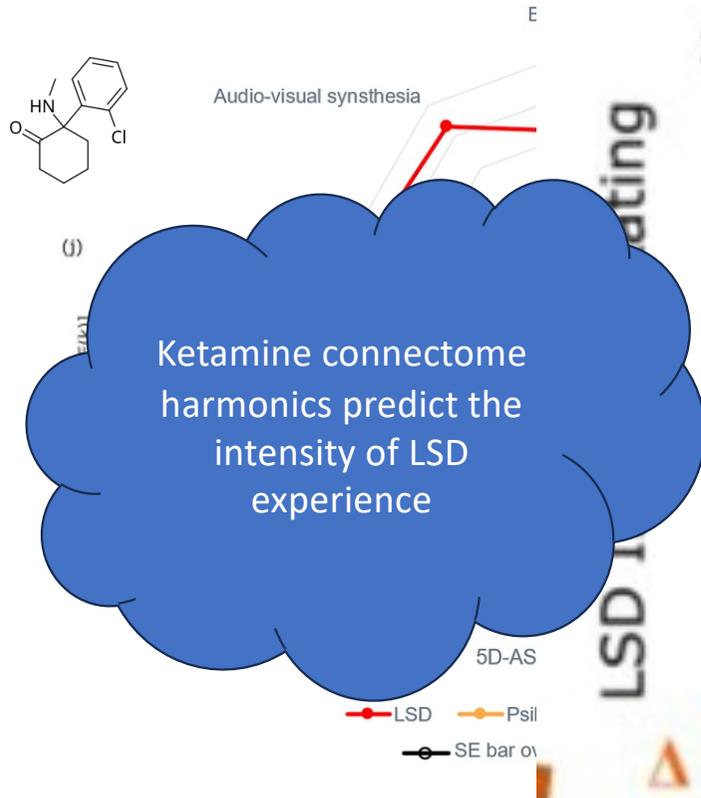

## Ketamine

## d Psilocybin

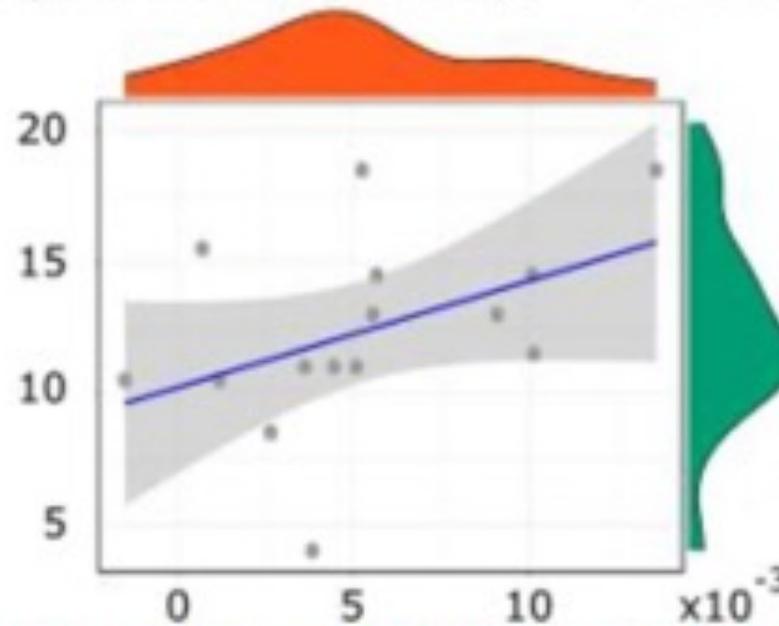

# Signatures of altered states of consciousness/ phenomena

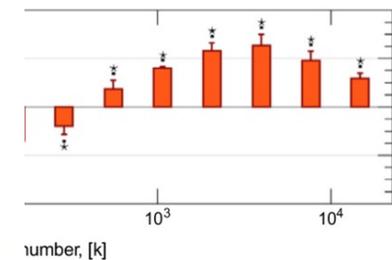

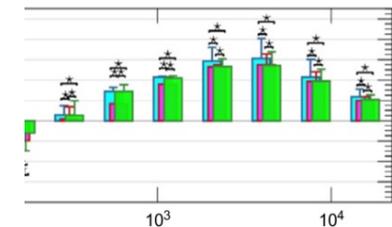

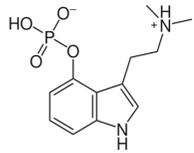

(c) Placebo vs LSD

Spearman  $\rho = 0.57, p = 0.026$

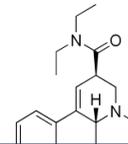

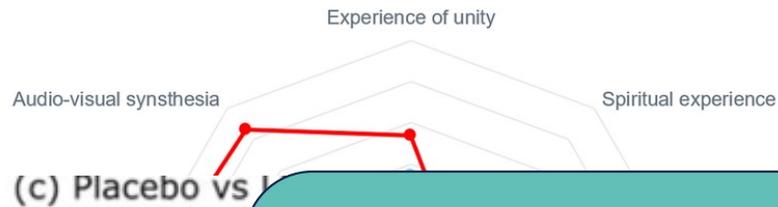

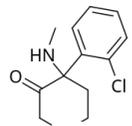

△ Ketamine-MVS projection

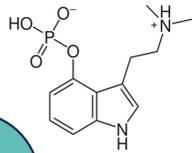

psilocybin

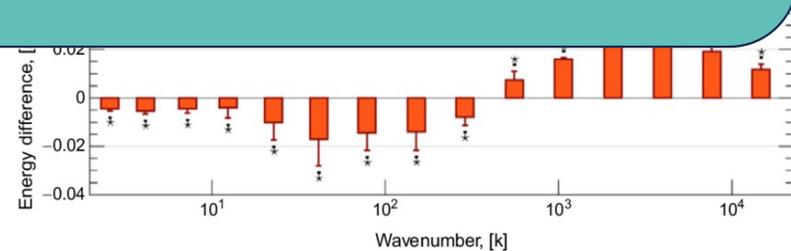

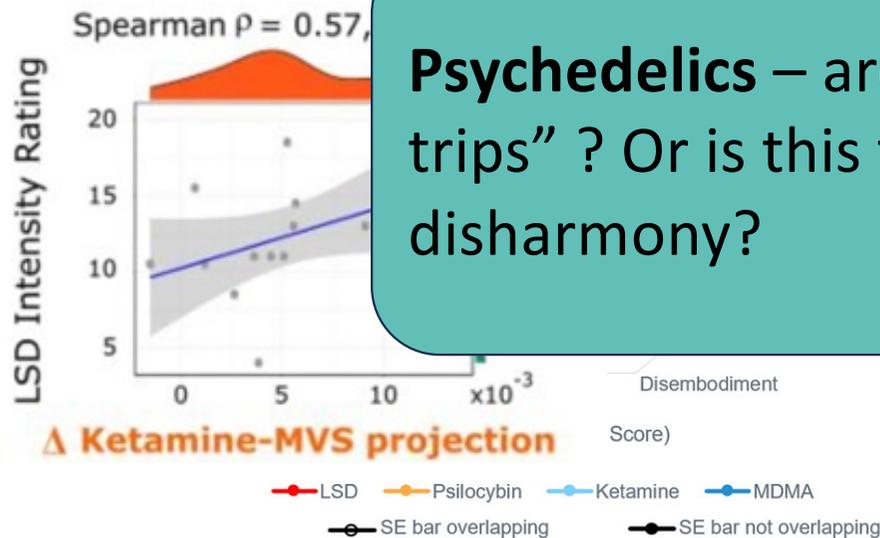

# Signatures of altered states of consciousness/ phenomenally rich experiences?

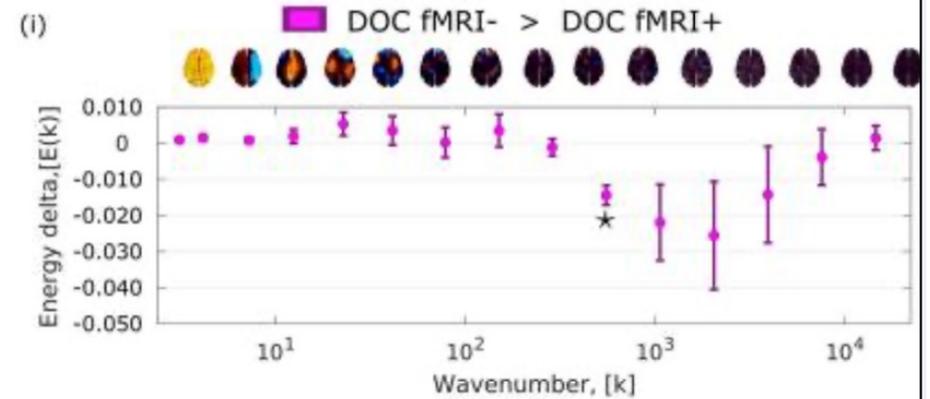

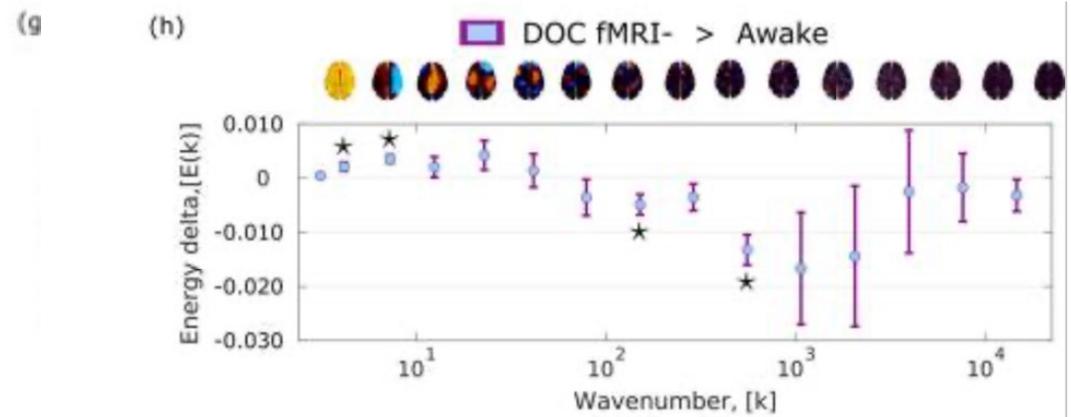

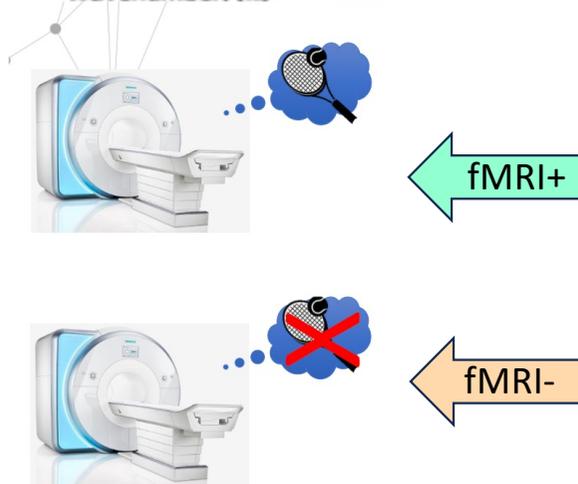

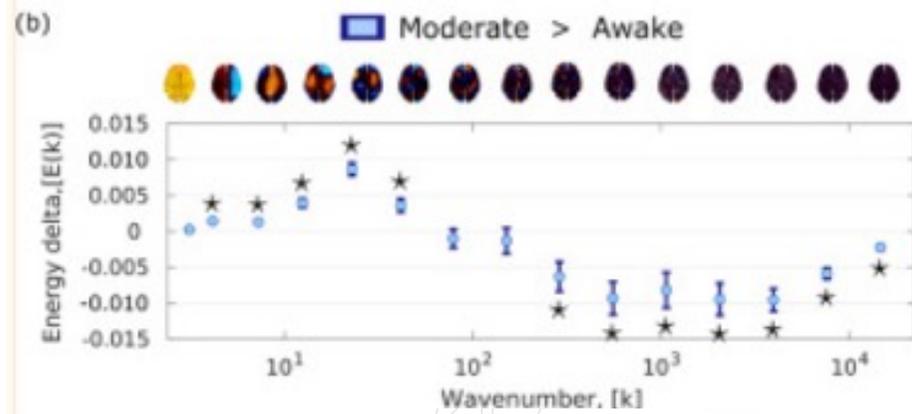

## LSD and Psilocybin

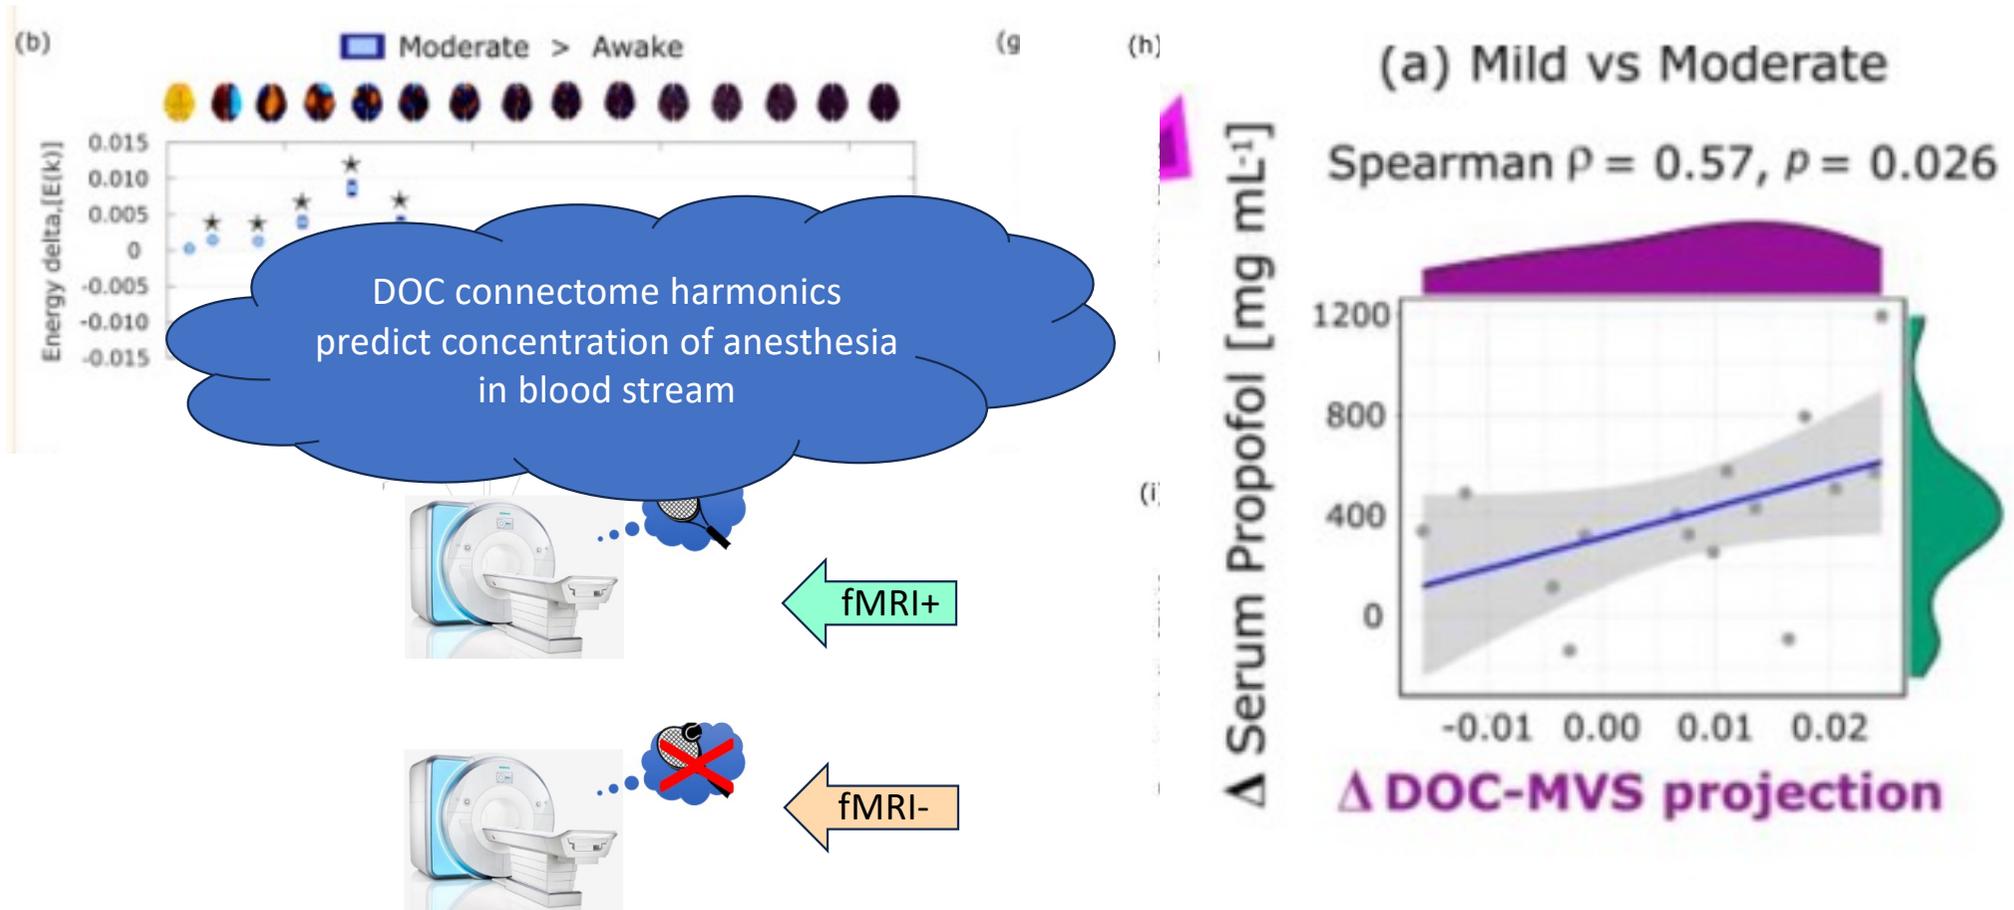

**Psychedelics** – are there signatures of “good” vs “bad trips” ? Or is this too macroscale? Harmony vs disharmony?

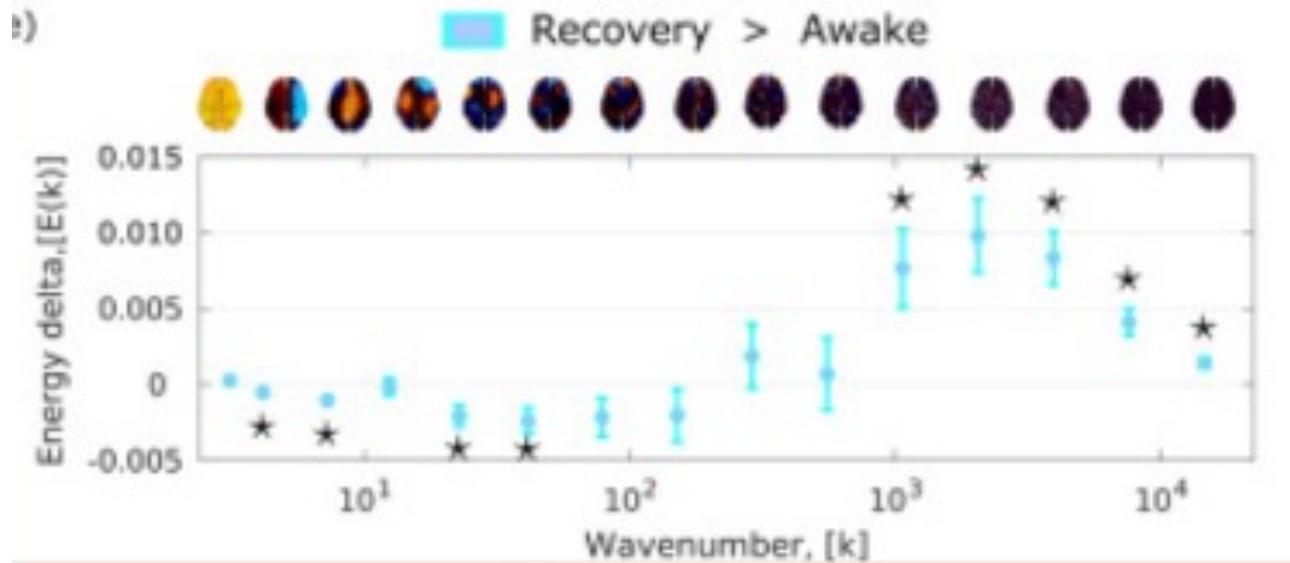

# Signatures of unconscious states

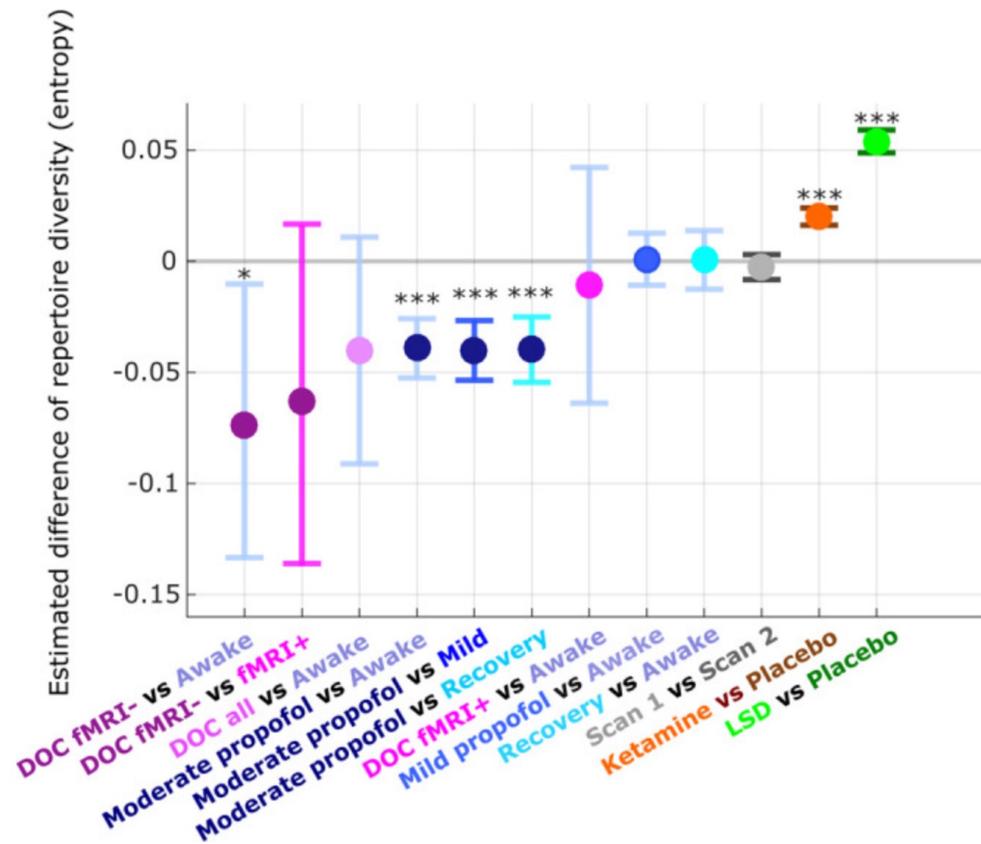

# Signatures of unconscious states

# How about recovery from anesthesia?

# Entropy

Do we need a wide or restricted repertoire of connectome harmonics to build the brain activity we observed?

Is your brain improvising more?  
Hallucinations?

The number of musical notes played during improvisation is significantly higher compared with memorized play of the same piece

# Main points, limitations, and future

## Contribution of high-frequencies to phenomenally rich states?

- A wider repertoire of brain activity feeding subjective experience?

## Synergy in the brain (+ music) → dynamic equilibrium

- Anesthesia
- DOC
- Psychedelics – decreased gating, increase excitation?

## Depression: rigid expectations?

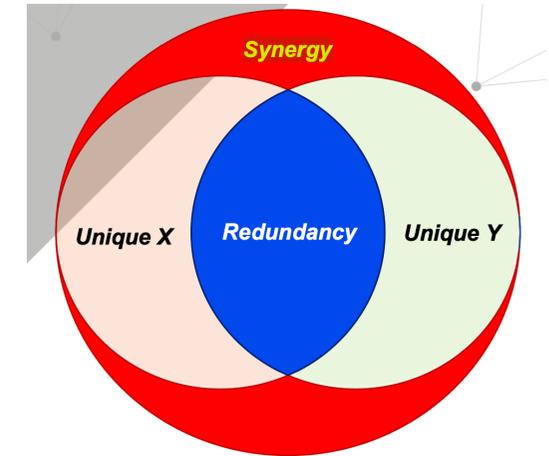

## Schizophrenia?

- Too many high frequencies ? Too much disorder? No synergy?

## Zolpidem GABA agonist → awakes SOME people with DOC's

- Individualized analysis

## Anesthesia : actually unconscious? Clinical definition

Luppi et al., 2022

**ALL MODELS ARE  
WRONG!!!! Maybe  
this is all bs 😊**

# Data sets

## Ketamine

20 participants, healthy

100 ng/ml continuous intravenous infusion or placebo

Siemens Trio 3T scanner: fMRI + MRI

2 scans, 1 week apart, resting state, eyes closed

## DOC

22 unresponsive wakefulness syndrome/ vegetative state or minimally conscious state

Tennis task: fMRI - or fMRI +  
•Motor Cognitive Dissociation

Siemens Trio 3T scanner: fMRI and MRI

Resting state fMRI

## Propofol

25 participants, healthy

No drug, 0.6 mg/ml (Mild),  
1.2 mg/ml (Moderate)

Siemens Trio 3T scanner: fMRI + MRI

Resting-state fMRI acquired at each stage, including recovery.

## LSD

15 participants, healthy, previous psychedelic use

75 µg intravenous or placebo

3T GE HDx system: fMRI + MRI

2 scans, 14 days apart, resting state, fMRI eyes closed

11-D altered states of consciousness questionnaire (ASC)

## Re-test

18 right-handed participants

Nothing

Siemens Trio 3T scanner: fMRI and MRI

2 scan, 2-4 weeks apart
