Introduction and citations

This Codebook lists all the variables included in the dataset collected through Workpackage 4 of the Localmultidem project and through other related sister projects that formed part of the Multicultural Democracy in Europe (MDE) research network. This workpackage involved collecting information at the individual (or micro) level through a survey to resident immigrants of different origins and a ‘control’ group of autochthonous population.

This Codebook is divided in two main sections. The first section contains the Common Variables of the Localmultidem project. The second section contains the Country-Specific Variables applied in some cities/countries included in the dataset.

Project Description

The Project

1 Project acronym
Localmultidem

2 Project name
Multicultural Democracy and Immigrants Social Capital in Europe: Participation, Organisational Networks, and Public Policies at the Local Level

3 Contract number
CIT5-CT-2005-028802

4 Abstract
The main objective of the project is to study the degree of political integration of the foreign-origin or immigrant population in several European cities, and therefore to study multicultural democracy at the local level. The research analyses the potential influence of four types of factors on political integration: immigrants’ individual characteristics; immigrants’ organizational structures; the structure of institutional and discursive opportunities, and the characteristics of the immigrant groups within the host society.

The information has been collected at three different levels of analysis: (1) the contextual or macro-level, using secondary sources and interviews with political and administrative authorities; (2) the organizational or meso-level, through the study of immigrants’ organisational structures and networks, carried out with surveys to immigrants’ associations; and (3) the individual or micro-level, through a survey to immigrants residents of different origins (with a control group of national-born citizens). This document refers exclusively to the survey data collected at the individual or micro-level.
