Doping in sports: Scientific, legal, financial and social challenges

Dr Matthias KAMBER

Director Antidoping Switzerland, Berne

At the beginning, the fight against doping worldwide lay with sport, state support was mostly subsidiary and limited to financial support.

Various doping scandals, however, led to the search for solutions in the fight against doping where sport no longer only monitored and regulated itself.

Today it is widely accepted that an effective and efficient fight against doping is only possible with targeted and scientifically driven testing programs, up-to-date analysis in the lab, a sound legal framework and interdisciplinary prevention and education.

These aspects will be shown with international and national examples.

Conférence présentée le

LUNDI 29 OCTOBRE 2012 à 17h30

Université de Genève – Bâtiment Sciences II
Auditoire A. Pictet – A100
30, quai Ernest-Ansermet, Genève

La conférence est publique
